

SpectraGel®

100% SILICONE GEL FOR SCAR REDUCTION THERAPY

PRODUCT INFORMATION DATA SHEET

NOTE* FOR SPECIFIC INFORMATION REGARDING SPECTRAGEL®2Q, PLEASE SEE REVERSE.

DESCRIPTION: Spectragel® is a silicone elastomer gel indicated for the safe and effective management of both old and new hypertrophic, keloid, burn, surgical, and general scars. Scars that have a raised and discolored appearance, may soften and fade with regular use of Spectragel®. Silicone Scar gels have also been shown to stop the development of scars when used prophylactically. This product is clear, odorless, and self-drying. When properly applied, Spectragel® instantly bonds to the affected scar, forming a protective coating over the surface of the scar and stays on until it is washed off with soap and warm water.

Spectragel® is available in a 10gr. tube (MFG PN 300-110) and a 1oz. tube (MFG PN 300-130). The 10 gram tube is approximately a 90 day supply for a 3-4 inch scar.

WARRANTY INFORMATION: Spectrum Designs, Inc. warrants that reasonable care was used in the manufacture of this product. Spectrum Designs, Inc. does not warrant either a good effect or against an ill effect following this product's use. Spectrum Designs, Inc.'s sole responsibility in the event that Spectrum determines a product is defective, when shipped by Spectrum, shall be replacement of the product. This warranty is in lieu of and excludes all other warranties, not expressly herein, whether expressed or implied, by operating of law or otherwise including any implied warranties of merchantability or fitness for product use.

INSTRUCTIONS FOR USE: Keep out of reach of children. For external use only. Do not apply this product to broken skin, open wounds, third degree burns, mouth, eyes, or mucous membranes. If irritation or redness develops, discontinue use and consult your physician.

- Step 1. Wash both hands and the scar with a mild soap and water, and pat dry.
- Step 2. Apply a very small amount of Spectragel®, directly onto the scar with fingertips.
- Step 3. In a circular motion, working from the center of the scar outward, cover the scar tissue with a thin layer of Spectragel®.
- Step 4. If tackiness is observed, wipe away any excess gel.
- Step 5. Allow Spectragel® to dry for 5-10 minutes to avoid staining of clothing.
- Step 6. Apply Spectragel® every 12 hours, and follow the above steps 1-5 with each application. Continue use for 8-12 weeks, or as directed by your physician.
